

## Project 4: Proof of Work

## Report

## Mabon Ninan 1

The screenshot shows a terminal window with a dark background. At the top, there is a tab labeled "Fastrunner.bash" with a close button. Below the tab, the command prompt shows the user is in the directory "data" and has opened a file named "input.txt" using a text editor. The first line of the file contains the text "1 M13883690".

```
$ Fastrunner.bash
HW > pow_m13883690 > data > input.txt
1 M13883690
```

### 1. Target Generation Function:

[illegible]

## 2. Solution Generation Function

```
$ Fastrunner.bash solutions_20.txt X
HW > pow_m13883690 > data > solutions_20.txt
1 1548003
```

### 3. Verification Function:

```
Running main.py with argument i=20
Solution Nonce: 1548003
Solution: 1548003
Is Valid Solution: 1
Runtime: 1.1970717906951904
Files renamed to solutions_20.txt and target_20.txt
```

#### 4. Performance of POW:

### Runtime Analysis:

Running main.py with argument i=16

Solution Nonce: 5948

Solution: 5948

Is Valid Solution: 1

Runtime: 0.004956245422363281

Files renamed to solutions\_16.txt and target\_16.txt

Running main.py with argument i=17

Solution Nonce: 5948

Solution: 5948

Is Valid Solution: 1

Runtime: 0.004708528518676758

Files renamed to solutions\_17.txt and target\_17.txt

Running main.py with argument i=18

Solution Nonce: 1417293

Solution: 1417293

Is Valid Solution: 1

Runtime: 1.095245122909546

Files renamed to solutions\_18.txt and target\_18.txt

Running main.py with argument i=19

Solution Nonce: 1417293

Solution: 1417293

Is Valid Solution: 1

Runtime: 1.095334768295288

Files renamed to solutions\_19.txt and target\_19.txt

Running main.py with argument i=20

Solution Nonce: 1548003

Solution: 1548003

Is Valid Solution: 1

Runtime: 1.1970717906951904

Files renamed to solutions\_20.txt and target\_20.txt

Running main.py with argument i=21

Solution Nonce: 3135790

Solution: 3135790

Is Valid Solution: 1

Runtime: 2.4319815635681152

Files renamed to solutions\_21.txt and target\_21.txt

Running main.py with argument i=22

Solution Nonce: 9618204

Solution: 9618204

Is Valid Solution: 1

Runtime: 7.426326274871826

Files renamed to solutions\_22.txt and target\_22.txt

Running main.py with argument i=23

Solution Nonce: 9618204

Solution: 9618204

Is Valid Solution: 1

Runtime: 7.391636848449707

Files renamed to solutions\_23.txt and target\_23.txt

Running main.py with argument i=24

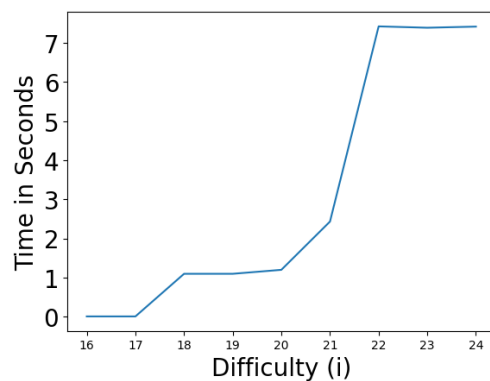

Solution Nonce: 9618204

Solution: 9618204

Is Valid Solution: 1

Runtime: 7.420438051223755

Files renamed to solutions\_24.txt and target\_24.txt

This project simulates Bitcoin mining by implementing the Proof of Work (POW) algorithm. The program computes a target based on the specified POW difficulty, generates a POW solution for a given input message and target, and verifies the validity of a solution using the SHA-256 hash function. The SHA-256 hash function ensures the cryptographic integrity of the mining process. Users can interact with the program by computing targets, mining for solutions, and verifying the authenticity of obtained solutions, gaining insights into the fundamental aspects of POW in cryptocurrency systems.

RUN CODE: `bash Fastrunner.bash`
